

Work for human development

Briefing note for countries on the 2015 Human Development Report

Tanzania (United Republic of)

Introduction

The *2015 Human Development Report (HDR) Work for Human Development* examines the intrinsic relationship between work and human development. Work, which is a broader concept than jobs or employment, can be a means of contributing to the public good, reducing inequality, securing livelihoods and empowering individuals. Work allows people to participate in the society and provides them a sense of dignity and worth. In addition, work that involves caring for others or voluntarism builds social cohesion and strengthens bonds within families and communities.

These are all essential aspects of human development. But a positive link between work and human development is not automatic. The link can be broken in cases of exploitative and hazardous conditions, where labour rights are not guaranteed or protected, where social protection measures are not in place, and when unequal opportunities and work related discrimination increase and perpetuate socioeconomic inequality.

Work can enhance human development when policies are taken to expand productive, remunerative and satisfying work opportunities; enhance workers' skills and potentials; and ensure their rights, safety, and wellbeing. Measuring aspects of work, both positive and negative, can help shape policy agendas and track progress toward human development enhancing work. But many countries are missing international data at the country level on key indicators including child labour, forced labour, unpaid care work, time use, labour regulations, and social protection. This limits the ability of countries to monitor progress on these fronts.

This briefing note is organized into seven sections. The first section presents information on the country coverage and methodology of the Statistical Annex of the 2015 HDR. The next five sections provide information about key indicators of human development including the Human Development Index (HDI), the Inequality-adjusted Human Development Index (IHDI), the Gender Development Index (GDI), the Gender Inequality Index (GII), and the Multidimensional Poverty Index (MPI). The final section presents a selection of additional indicators related to the topic of work.

It is important to note that national and international data can differ because international agencies standardize national data to allow comparability across countries and in some cases may not have access to the most recent national data. We encourage national partners to explore the issues raised in the HDR with the most relevant and appropriate data from national and international sources.

Country coverage and the methodology of the Statistical Annex of the 2015 HDR

The Statistical Annex of the 2015 HDR presents the 2014 HDI (values and ranks) for 188 countries and UN-recognized territories, along with the IHDI for 151 countries, the GDI for 161 countries, the GII for 155 countries, and the MPI for 101 countries. Country rankings and values of the annual Human Development Index (HDI) are kept under strict embargo until the global launch and worldwide electronic release of the HDR.

It is misleading to compare values and rankings with those of previously published reports, because of revisions and updates of the underlying data and adjustments to goalposts. Readers are advised to assess progress in HDI values by referring to table 2 ('Human Development Index Trends') in the Statistical Annex of the report. Table 2 is based on consistent indicators, methodology and time-series data and thus shows real changes in values and ranks over time, reflecting the actual progress countries have made. Small changes in values should be interpreted with caution as they may not be statistically significant due to sampling variation. Generally speaking, changes at the level of the third decimal place in any of the composite indices are considered insignificant.

Unless otherwise specified in the source, tables use data available to the Human Development Report Office (HDRO) as of 15 April 2015. All indices and indicators, along with technical notes on the calculation of composite indices, and additional source information are available online at <http://hdr.undp.org/en/data>

For further details on how each index is calculated please refer to Technical Notes 1-5 and the associated background papers available on the Human Development Report website: <http://hdr.undp.org/en/data>

Human Development Index (HDI)

The HDI is a summary measure for assessing long-term progress in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living. A long and healthy life is measured by life expectancy. Knowledge level is measured by mean years of education among the adult population, which is the average number of years of education received in a life-time by people aged 25 years and older; and access to learning and knowledge by expected years of schooling for children of school-entry age, which is the total number of years of schooling a child of school-entry age can expect to receive if prevailing patterns of age-specific enrolment rates stay the same throughout the child's life. Standard of living is measured by Gross National Income (GNI) per capita expressed in constant 2011 international dollars converted using purchasing power parity (PPP) rates.

To ensure as much cross-country comparability as possible, the HDI is based primarily on international data from the United Nations Population Division (the life expectancy data), the United Nations Educational, Scientific and Cultural Organization Institute for Statistics (the mean years of schooling and expected years of schooling data) and the World Bank (the GNI per capita data). As stated in the introduction, the HDI values and ranks in this year's report are not comparable to those in past reports (including the 2014 HDR) because of a number of revisions to the component indicators. To allow for assessment of progress in HDIs, the 2015 report includes recalculated HDIs from 1990 to 2014 using consistent series of data.

Tanzania (United Republic of)'s HDI value and rank

Tanzania (United Republic of)'s HDI value for 2014 is 0.521— which put the country in the low human development category—positioning it at 151 out of 188 countries and territories. Between 1985 and 2014, Tanzania (United Republic of)'s HDI value increased from 0.371 to 0.521, an increase of 40.5 percent or an average annual increase of about 1.18 percent.

Table A reviews Tanzania (United Republic of)'s progress in each of the HDI indicators. Between 1980 and 2014, Tanzania (United Republic of)'s life expectancy at birth increased by 14.5 years, mean years of schooling increased by 2.6 years and expected years of schooling increased by 3.3 years. Tanzania (United Republic of)'s GNI per capita increased by about 55.9 percent between 1980 and 2014.

Table A: Tanzania (United Republic of)'s HDI trends based on consistent time series data and new goalposts

| | Life expectancy at birth | Expected years of schooling | Mean years of schooling | GNI per capita (2011 PPP\$) | HDI value |
|------|--------------------------|-----------------------------|-------------------------|-----------------------------|-----------|
| 1980 | 50.5 | | 2.5 | 1,547 | |
| 1985 | 51.0 | 5.9 | 3.2 | 1,381 | 0.371 |
| 1990 | 50.0 | 5.5 | 3.6 | 1,416 | 0.369 |
| 1995 | 48.7 | 5.4 | 4.1 | 1,340 | 0.367 |
| 2000 | 50.5 | 6.3 | 4.2 | 1,479 | 0.392 |
| 2005 | 55.6 | 7.7 | 4.8 | 1,815 | 0.448 |
| 2010 | 61.6 | 9.2 | 5.1 | 2,063 | 0.500 |
| 2011 | 62.7 | 9.2 | 5.1 | 2,152 | 0.506 |
| 2012 | 63.5 | 9.2 | 5.1 | 2,201 | 0.510 |
| 2013 | 64.3 | 9.2 | 5.1 | 2,300 | 0.516 |
| 2014 | 65.0 | 9.2 | 5.1 | 2,411 | 0.521 |

Figure 1 below shows the contribution of each component index to Tanzania (United Republic of)'s HDI since 1985.

Figure 1: Trends in Tanzania (United Republic of)'s HDI component indices 1985-2014

Assessing progress relative to other countries

Long-term progress can usefully be compared to other countries. For instance, during the period between 1985 and 2014 Tanzania (United Republic of), Mauritania and Togo experienced different degrees of progress toward increasing their HDIs (see figure 2).

Figure 2: HDI trends for Tanzania (United Republic of), Mauritania and Togo, 1985-2014

Tanzania (United Republic of)'s 2014 HDI of 0.521 is above the average of 0.505 for countries in the low human development group and above the average of 0.518 for countries in Sub-Saharan Africa. From Sub-Saharan Africa, countries which are close to Tanzania (United Republic of) in 2014 HDI rank and to some extent in population size are Uganda and Côte d'Ivoire, which have HDIs ranked 163 and 172 respectively (see table B).

Table B: Tanzania (United Republic of)'s HDI indicators for 2014 relative to selected countries and groups

| | HDI value | HDI rank | Life expectancy at birth | Expected years of schooling | Mean years of schooling | GNI per capita (PPP US\$) |
|--------------------------------------|-----------|----------|--------------------------|-----------------------------|-------------------------|---------------------------|
| Tanzania (United Republic of) | 0.521 | 151 | 65.0 | 9.2 | 5.1 | 2,411 |
| Uganda | 0.483 | 163 | 58.5 | 9.8 | 5.4 | 1,613 |
| Côte d'Ivoire | 0.462 | 172 | 51.5 | 8.9 | 4.3 | 3,171 |
| Sub-Saharan Africa | 0.518 | — | 58.5 | 9.6 | 5.2 | 3,363 |
| Low HDI | 0.505 | — | 60.6 | 9.0 | 4.5 | 3,085 |

Inequality-adjusted HDI (IHDI)

The HDI is an average measure of basic human development achievements in a country. Like all averages, the HDI masks inequality in the distribution of human development across the population at the country level. The 2010 HDR introduced the IHDI, which takes into account inequality in all three dimensions of the HDI by 'discounting' each dimension's average value according to its level of inequality. The IHDI is basically the HDI discounted for inequalities. The 'loss' in human development due to inequality is given by the difference between the HDI and the IHDI, and can be expressed as a percentage. As the inequality in a country increases, the loss in human development also increases. We also present the coefficient of human inequality as a direct measure of inequality which is an unweighted average of inequalities in three dimensions. For more details see Technical Note 2.

Tanzania (United Republic of)'s HDI for 2014 is 0.521. However, when the value is discounted for inequality, the HDI falls to 0.379, a loss of 27.3 percent due to inequality in the distribution of the HDI dimension indices. Uganda and Côte d'Ivoire show losses due to inequality of 30.2 percent and 38.0 percent respectively. The average loss due to inequality for low HDI countries is 32.0 percent and for Sub-Saharan Africa it is 33.3 percent. The Human inequality coefficient for Tanzania (United Republic of) is equal to 27.2 percent.

Table C: Tanzania (United Republic of)'s IHDI for 2014 relative to selected countries and groups

| | IHDI value | Overall loss (%) | Human inequality coefficient (%) | Inequality in life expectancy at birth (%) | Inequality in education (%) | Inequality in income (%) |
|--------------------------------------|------------|------------------|----------------------------------|--------------------------------------------|-----------------------------|--------------------------|
| Tanzania (United Republic of) | 0.379 | 27.3 | 27.2 | 30.4 | 28.5 | 22.7 |
| Uganda | 0.337 | 30.2 | 30.2 | 33.8 | 29.4 | 27.3 |
| Côte d'Ivoire | 0.287 | 38.0 | 37.6 | 40.2 | 45.1 | 27.4 |
| Sub-Saharan Africa | 0.345 | 33.3 | 33.1 | 36.6 | 35.3 | 27.5 |
| Low HDI | 0.343 | 32.0 | 31.7 | 35.0 | 37.9 | 22.0 |

Gender Development Index (GDI)

In the 2014 HDR, HDRO introduced a new measure, the GDI, based on the sex-disaggregated Human Development Index, defined as a ratio of the female to the male HDI. The GDI measures gender inequalities in achievement in three basic dimensions of human development: health (measured by female and male life expectancy at birth), education (measured by female and male expected years of schooling for children and mean years for adults aged 25 years and older); and command over economic resources (measured by female and male estimated GNI per capita). For details on how the index is constructed refer to Technical Note 3. Country groups are based on absolute deviation from gender parity in HDI. This means that the grouping takes into consideration inequality in favour of men or women equally.

The GDI is calculated for 161 countries. The 2014 female HDI value for Tanzania (United Republic of) is 0.504 in contrast with 0.538 for males, resulting in a GDI value of 0.938. In comparison, GDI values for Uganda and Côte d'Ivoire are 0.886 and 0.810 respectively (see Table D).

Table D: Tanzania (United Republic of)'s GDI value and its components relative to selected countries and groups

| | Life expectancy at birth | | Expected years of schooling | | Mean years of schooling | | GNI per capita | | HDI values | | F-M ratio |
|--------------------------------------|--------------------------|------|-----------------------------|------|-------------------------|------|----------------|-------|------------|-------|-----------|
| | Female | Male | Female | Male | Female | Male | Female | Male | Female | Male | GDI value |
| Tanzania (United Republic of) | 66.4 | 63.5 | 9.0 | 9.3 | 4.5 | 5.8 | 2,320 | 2,502 | 0.504 | 0.538 | 0.938 |
| Uganda | 60.3 | 56.7 | 9.7 | 9.9 | 4.5 | 6.3 | 1,226 | 1,997 | 0.452 | 0.510 | 0.886 |
| Côte d'Ivoire | 52.4 | 50.7 | 7.9 | 10.0 | 3.2 | 5.3 | 2,146 | 4,157 | 0.410 | 0.507 | 0.810 |
| Sub-Saharan Africa | 59.7 | 57.1 | 9.1 | 10.3 | 4.2 | 6.0 | 2,626 | 4,148 | 0.480 | 0.550 | 0.872 |
| Low HDI | 61.8 | 59.3 | 8.3 | 9.8 | 3.4 | 5.5 | 1,983 | 4,201 | 0.456 | 0.549 | 0.830 |

Gender Inequality Index (GII)

The 2010 HDR introduced the GII, which reflects gender-based inequalities in three dimensions – reproductive health, empowerment, and economic activity. Reproductive health is measured by maternal mortality and adolescent birth rates; empowerment is measured by the share of parliamentary seats held by women and attainment in secondary and higher education by each gender; and economic activity is measured by the labour market participation rate for women and men. The GII can be interpreted as the

loss in human development due to inequality between female and male achievements in the three GII dimensions. For more details on GII please see Technical Note 4.

Tanzania (United Republic of) has a GII value of 0.547, ranking it 125 out of 155 countries in the 2014 index. In Tanzania (United Republic of), 36.0 percent of parliamentary seats are held by women, and 5.6 percent of adult women have reached at least a secondary level of education compared to 9.5 percent of their male counterparts. For every 100,000 live births, 410 women die from pregnancy related causes; and the adolescent birth rate is 122.7 births per 1,000 women of ages 15-19. Female participation in the labour market is 88.1 percent compared to 90.2 for men.

In comparison, Uganda and Côte d'Ivoire are ranked at 122 and 151 respectively on this index.

Table E: Tanzania (United Republic of)'s GII for 2014 relative to selected countries and groups

| | GII value | GII Rank | Maternal mortality ratio | Adolescent birth rate | Female seats in parliament (%) | Population with at least some secondary education (%) | | Labour force participation rate (%) | |
|--------------------------------------|-----------|----------|--------------------------|-----------------------|--------------------------------|-------------------------------------------------------|------|-------------------------------------|------|
| | | | | | | Female | Male | Female | Male |
| Tanzania (United Republic of) | 0.547 | 125 | 410 | 122.7 | 36.0 | 5.6 | 9.5 | 88.1 | 90.2 |
| Uganda | 0.538 | 122 | 360 | 126.6 | 35.0 | 22.9 | 33.5 | 75.8 | 79.2 |
| Côte d'Ivoire | 0.679 | 151 | 720 | 130.3 | 9.2 | 14.0 | 30.1 | 52.4 | 81.4 |
| Sub-Saharan Africa | 0.575 | — | 506 | 109.7 | 22.5 | 22.1 | 31.5 | 65.4 | 76.6 |
| Low HDI | 0.583 | — | 461 | 92.1 | 20.5 | 14.8 | 28.3 | 57.2 | 79.1 |

Maternal mortality ratio is expressed in number of deaths per 100,000 live births and adolescent birth rate is expressed in number of births per 1,000 women ages 15-19.

Multidimensional Poverty Index (MPI)

The 2010 HDR introduced the MPI, which identifies multiple deprivations in the same households in education, health and living standards. The education and health dimensions are each based on two indicators, while the standard of living dimension is based on six indicators. All of the indicators needed to construct the MPI for a household are taken from the same household survey. The indicators are weighted to create a deprivation score, and the deprivation scores are computed for each household in the survey. A deprivation score of 33.3 percent (one-third of the weighted indicators), is used to distinguish between the poor and nonpoor. If the household deprivation score is 33.3 percent or greater, the household (and everyone in it) is classified as multidimensionally poor. Households with a deprivation score greater than or equal to 20 percent but less than 33.3 percent are *near multidimensional poverty*. Finally, households with a deprivation score greater than or equal to 50 percent live in severe multidimensional poverty. Definitions of deprivations in each dimension, as well as methodology of the MPI are given in Technical Note 5.

The most recent survey data that were publically available for Tanzania (United Republic of)'s MPI estimation refer to 2010. In Tanzania (United Republic of) 66.4 percent of the population (29,842 thousand people) are multidimensionally poor while an additional 21.5 percent live near multidimensional poverty (9,680 thousand people). The breadth of deprivation (intensity) in Tanzania (United Republic of), which is the average of deprivation scores experienced by people in multidimensional poverty, is 50.4 percent. The MPI, which is the share of the population that is multi-dimensionally poor, adjusted by the intensity of the deprivations, is 0.335. Uganda and Côte d'Ivoire have MPIs of 0.359 and 0.307 respectively.

Table F compares income poverty, measured by the percentage of the population living below PPP US\$1.25 per day, and multidimensional poverty. It shows that income poverty only tells part of the story. The multidimensional poverty headcount is 22.9 percentage points higher than income poverty. This implies that individuals living above the income poverty line may still suffer deprivations in education, health and other living conditions. Table F also shows the percentage of Tanzania (United Republic of)'s population that lives near multidimensional poverty and that lives in severe multidimensional poverty. The contributions

of deprivations in each dimension to overall poverty complete a comprehensive picture of people living in multidimensional poverty in Tanzania (United Republic of). Figures for Uganda and Côte d'Ivoire are also shown in the table for comparison.

Table F: The most recent MPI for Tanzania (United Republic of) relative to selected countries

| | Survey year | MPI value | Head-count (%) | Intensity of deprivations (%) | Population share (%) | | | Contribution to overall poverty of deprivations in (%) | | |
|--------------------------------------|-------------|-----------|----------------|-------------------------------|----------------------|-------------------|---------------------------|--------------------------------------------------------|-----------|------------------|
| | | | | | Near poverty | In severe poverty | Below income poverty line | Health | Education | Living Standards |
| Tanzania (United Republic of) | 2010 | 0.335 | 66.4 | 50.4 | 21.5 | 32.1 | 43.5 | 28.2 | 16.9 | 54.9 |
| Uganda | 2011 | 0.359 | 70.3 | 51.1 | 20.6 | 33.3 | 37.8 | 30.2 | 18.0 | 51.9 |
| Côte d'Ivoire | 2011/2012 | 0.307 | 59.3 | 51.7 | 17.9 | 32.4 | 35.0 | 25.8 | 36.5 | 37.7 |

Work Indicators

Table G collates the work related indicators that are available for Tanzania (United Republic of) from the HDR 2015 Statistical Annex. The data provide a partial picture of the conditions surrounding work in the country and the areas that may benefit from policy attention. Note that not all indicators have sufficient country coverage for aggregate estimation.

Table G: Additional indicators related to work for Tanzania (United Republic of)

| | Tanzania (United Republic of) | Low HDI | Developing countries | Sub- Saharan Africa |
|--------------------------------------------------------------------|-------------------------------------|---------|-------------------------|---------------------------|
| Employment to population ratio (% ages 15 and older) | 86.0 | 63.9 | 60.7 | 65.7 |
| Labour force participation rate (% ages 15 and older) | 89.1 | 68.1 | 64.3 | 70.9 |
| <i>Female</i> | 88.1 | 57.2 | 49.5 | 65.4 |
| <i>Male</i> | 90.2 | 79.1 | 78.7 | 76.6 |
| Share of employment in agriculture (% of total employment) | 76.5 | -- | 36.9 | 59.0 |
| Share of employment in services (% of total employment) | 19.2 | -- | 39.1 | 30.0 |
| Labour force with tertiary education (%) | -- | -- | -- | -- |
| Vulnerable employment (% of total employment) | 74.0 | -- | 54.0 | -- |
| Total unemployment (% of labour force) | 3.5 | 9.7 | 5.6 | 11.9 |
| Long term unemployment (% of labour force) | -- | -- | -- | -- |
| Youth unemployment (% of youth labour force) | 5.8 | 9.8 | 14.6 | 13.5 |
| Youth not in school or employment (% ages 15-24) | -- | -- | -- | -- |
| Labour productivity: output per worker (2011 PPP \$) | 2,822 | -- | -- | -- |
| Child labour (% ages 5-14 years) | 21.1 | 23.8 | 14.5 | 24.7 |
| Domestic workers (% of total employment) | | | | |
| <i>Female</i> | 1.2 | -- | -- | -- |
| <i>Male</i> | 0.3 | -- | -- | -- |
| Working poor, PPP \$2 per day (% of total employment) | 73.9 | 67.5 | 33.8 | 70.5 |
| Unemployment benefits recipients (% of unemployed ages 15-64) | 0.0 | 0.0 | 2.5 | 2.3 |
| Mandatory paid maternity leave (days) | 84.0 | 85.0 | 99.0 | 90.0 |
| Old age pension recipients (% of statutory pension age population) | 3.2 | 9.8 | 51.0 | 21.9 |
| Internet users (% of population) | 4.9 | 16.0 | 31.9 | 19.3 |
| Mobile phone subscribers (per 100 people) | 62.8 | 65.6 | 91.2 | 71.1 |

Additionally, Table H presents the number of minutes spent per day in paid and unpaid activities separately for women and men. Unfortunately, time use survey data is not available for many countries and regional aggregates cannot be calculated.

Table H: Paid versus unpaid work in Tanzania (United Republic of) by gender

| Country | Survey year | Total paid work | | Total unpaid work | |
|-------------------------------|----------------|--------------------------|------|--------------------------|------|
| | | Female | Male | Female | Male |
| | | <i>(minutes per day)</i> | | <i>(minutes per day)</i> | |
| Tanzania (United Republic of) | 2006 | 205 | 276 | 212 | 73 |
